

Rubber Pond Liner Installation Suggestions

When building a pond using a rubber liner, we recommend digging the hole and ordering the liner to go into it. Most liners are shipped within 24 to 48 hours of ordering and custom cut liners come from rolls in stock at the nursery. To calculate the liner needed, measure (in feet) the hole as follows:

Liner Length = Max Length + Max Depth + Max Depth + 2 feet

Liner Width = Max Width + Max Depth + Max Depth + 2 feet

We recommend allowing extra liner to avoid shortages. This allows for miscalculations, changes in plans or other unforeseen circumstances. Remember to allow enough liner for submerged rocks and plant shelves. If you are unsure about the size to order,

Flexible pond liners are the favorite choice for many because they offer versatility in shape, size and depth. Use our liner to build the water garden of you dreams. Liner must be used under the waterfalls (as shown above). Liners are sold in pre-cut or custom-cut sizes or by the roll for larger ponds. Find the liner that best suits your needs.

Select Rolls, Pre-cut or Custom Cut Rubber Liner.

EPDM-II 45 mil Liners are economical and easy to install. Fish-friendly, heavy-duty, black material has a twenty year limited warranty. The expected life of this liner is 60 years when protected from sunlight exposure. Rocks or other coping will protect the edges from damaging sunlight. Easiest liner to work with, even in cold temperatures. Rubber liners let you make a pond any depth, size or shape, while keeping a very natural effect.
